

## Tutorial 5

### Question 1

How to make an application to transmit data reliably over UDP?

### Question 2

How will the process at Host C know that the UDP segment X is from Host A, and the UDP segment Y is from Host B?

### Question 3

A UDP segment (header + data) is represented in hexadecimal 6660 5555 8F0C. Calculate the checksum and represent it in hexadecimal.
